(207) 671-2218

Front End Web Developer

I develop the user interactions and implement visual elements for web applications.

Projects

Shaw's Lottery Machine Calculator

I developed a HTML lottery calculator to quickly calculate the amount of tickets in each slot and the price value of each ticket. The service desk clerk or bookkeeper inputs the numbers on the lottery ticket slots and it computes the amount of tickets and the price value. It is integrated in the service desk computer that is used for bookkeeping.

Secret Santa Creator Emailer

I programmed using a secret santa creator Node JS. It took people's information, name and email as a JSON file and randomly assigned each person with a secret santa. The person's name as secret santa was automatically emailed to the person after running the program. Working on making a GUI for the program with Electron JS and React JS.

Education

Southern Maine Community College - South Portland, Maine   *September, 2020 - July 2022*
Associates in computer science

FreeCodeCamp - Online   *April, 2020 - Present*
Finished JavaScript Algorithms Certificate

Capital Area Technical Center - Augusta, Maine
Graphic Design   *September, 2018 - June, 2020*
I was inducted in the National Honor Technical Society and achieved the highest grade in graphic design class. I've achieved 4th SkillsUSA Nationals Advertising Design

Work Experience

Shaw's - Brunswick, Maine   *August, 2018 - Present*
Checkout Supervisor / Service Desk Clerk
I managed the cash registers and people, ensuring the checkout is running efficiently. I also run the service desk, giving customer service to people and helping with bookkeeping at night.

Skills

HTML, CSS, Sass, Javascript, ReactJS, Adobe Photoshop, and Adobe Illustrator
